## DETAILED ACTION

### *Specification*

1. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the **range of 50 to 150 words**. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

### ***Claim Rejections - 35 USC § 112***

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 21-14 and 27-35 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 21 and 27, line 1, it is unclear. What does applicant meant of "a method" of? And also what does applicant meant of "a structure" is?

Art. Unit: 2827

***Claim Rejections - 35 USC § 102***

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 21-24, and 27-35 are rejected under 35 U.S.C. 102(b) as being anticipated by Kawakita et al. (U. S. Patent 5,440,075).

As best understood to claims 21-22 and 27-29, Kawakita discloses a structure and method of providing a conducting element into a through hole of a circuit board as shown in figures 1-13 comprising:

a conductive element (103, column 4, lines 56-57) embedded into an opening (through hole, column 4, line 54-55) of a laminate (101, column 4, line 53), the conductive element is press into the opening of the laminate, wherein the conductive element includes an inner element covered by an outer element (copper foil 102-figures 1-4, or 502-figure 5), (column 4, lines 57-68, column 5, lines 20-21).

As to claims 23-24, and 30, Kawakita discloses the structure and method as shown in figures 1-5 wherein the conductive element (103) is a sphere (see figure 1-3) or cylinder (figure 5).

As to claims 31 and 34, Kawakita discloses the structure and method as shown in figures 1-13 wherein the outer element (102, 502) of the conductive element (103) is a copper (column 4, line 57, column 5, lines 20-21).

As to claim 32, Kawakita discloses the structure as shown in figures 1-13 wherein the laminate is epoxy (column 5, line 1).

As to claims 33 and 35, Kawakita discloses the structure and method as shown in figures 1-13 wherein the inner element of the conductive element (103) is an insulating material such as glass, rubber, or plastic (figure 5, column 5, line 18-19).

### ***Response to Arguments***

6. Applicant's arguments with respect to claims 21-14 and 27-35 have been considered but are moot in view of the new ground(s) of rejection.

### ***Conclusion***

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Rosenthal et al., Murakami, and Caporizzo disclose related art.
